rock mechanics as a guide for efficient utilization of natural resources proceedings of the 30th u s symposium west virginia 19 22 june 1989 The Hoek-Brown failure criterion was originally developed for estimating the strengths of hard rock masses. Because of the lack of suitable alternatives, the criterion has been applied to a variety of rock masses including very poor quality rocks, which could almost be classed as engineering soils.

rock mechanics as a guide for efficient utilization of natural resources proceedings of the 30th u s symposium west virginia 19 22 june 1989 Soil mechanics is a branch of soil physics and applied mechanics that describes the behavior of soils. It differs from fluid mechanics and solid mechanics in the sense that soils consist of a heterogeneous mixture of fluids (usually air and water) and particles (usually clay, silt, sand, and gravel) but soil may also contain organic solids and other matter.

rock mechanics as a guide for efficient utilization of natural resources proceedings of the 30th u s symposium west virginia 19 22 june 1989 Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...
